ACCESS CONTROL SYSTEM

Overview

Logic is a new electromechanical product line that consists of digital keys and digital cylinders. Logic offers most of the functionality of more sophisticated access control systems. It includes features like scheduling, audit trails, and the ability to easily add and delete user keys. However, Logic installs without any wiring, door or frame modifications, or additional hardware. In fact, most doors can be upgraded to Logic in less than five minutes. The Logic product family includes Rim, Mortise, Key-In-Knob cylinders, deadbolts—both in commercial and residential styles—padlocks, and cam locks.
